

Mozaïk™ is a game-changing hemostatic device designed to significantly reduce post-dialysis compression time, a critical step in stopping bleeding that can take more than 10 minutes on average, or even more than 25 minutes for patients receiving high doses of anticoagulants.

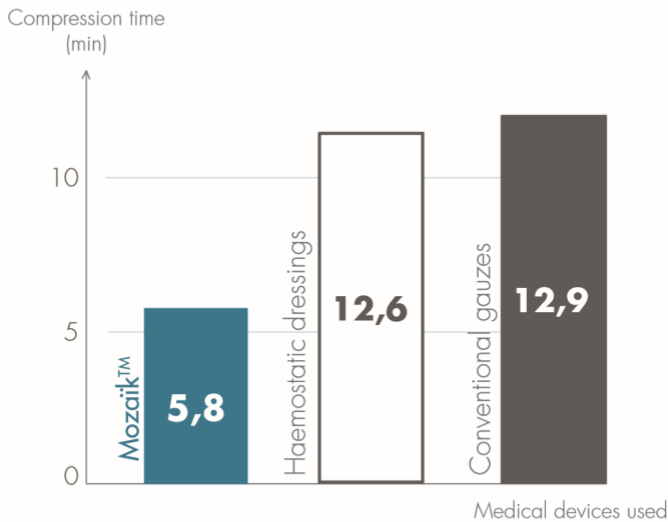

By addressing this key issue for both caregivers and patients, Mozaïk™ offers the following advantages:

- Transparent design**
Visual monitoring of clotting process
- Thick foam frame**
Facilitates installation and prevents side leaks
- Mechanical action**
without hemostatic active substance

COMPRESSION TIME COMPARISON

RESULTS FROM VARIOUS SCIENTIFIC STUDIES

Mozaïk™ VS conventional gauzes**
VS haemostatic dressings**

*EVAMOZ study, directed by ECHO association, 2024

**Evaluation de nos pratiques professionnelles : apport des pansements hémostatiques dans l'hémostase de la fistule artério-veineuse ? - Lila GHOUTI-TERKI

TIME SAVING

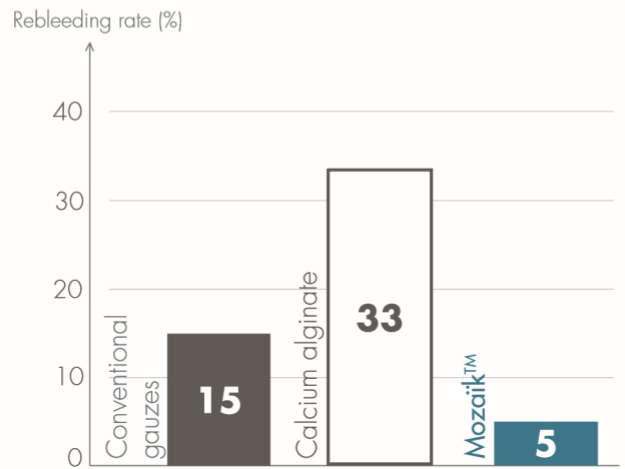

Mozaïk™ reduces compression times by an average of more than **6 min per treatment**.

Time saving:

Per week : **18** minutes
Per year : **15** hours

Based on 3 dialysis per week

BLEEDING RATE COMPARISON*

*Guerraoui A (2017) Prospective Study: evaluation of arterio venous fistula (AVF) compression with new device Mozaïk™ in two French hemodialysis facilities. Submitted abstract Société Française de néphrologie (NICE City France).

PATIENT SATISFACTION SURVEY* USING MOZAÏK™

CAREGIVER SATISFACTION SURVEY* USING MOZAÏK™

*EVAMOZ study, directed by ECHO association, 2024

CONCLUSION

Mozaïk™ offers a remarkable **54 %** reduction in compression time compared to standard protocols, saving valuable time for caregivers and enhancing patient comfort. With a significant decrease in rebleeding episodes to just **5 %** of cases, Mozaïk™ ensures a safer dialysis process.
